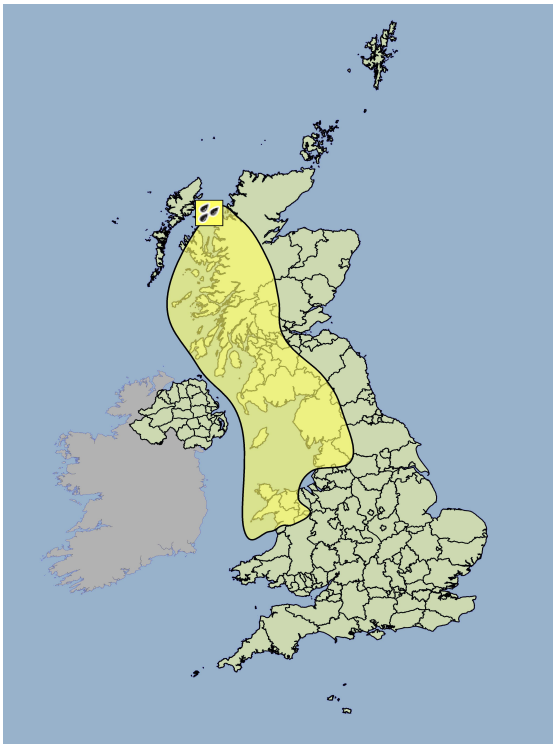
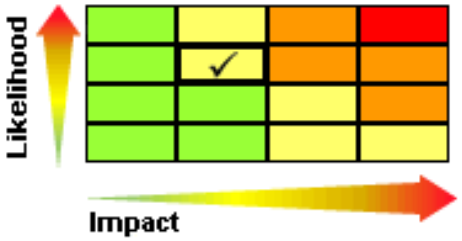
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep low pressure system is expected to move across the Atlantic later this week, arriving into western parts of the UK on Friday afternoon. With mild air and strong winds some large rainfall totals are possible, particularly over high ground in the western and central Scotland, northwest England and north Wales. There remains some uncertainty around this system and this alert is likely to be updated in the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Fri, 20th Dec 2013** until **03:00 on Sat, 21st Dec 2013**

An area of heavy, rain along with strong to gale force winds, is expected to cross the north of the UK from Friday afternoon and into the early hours of Saturday morning. This will bring some locally large accumulations, particularly on hills, and following previous wet weather is likely to lead to some localised flooding across western and central parts of Scotland, north and mid-Wales and northwest England.

This is an update to the Alert issued yesterday.

The public should be aware of the potential for disruption from flooding and keep up to date with latest forecasts and warnings from the Met Office, Environment Agency and Scottish Environment Protection Agency.
